

Deckle Edge Brush

This brush is used with the Eraser tool to create deckled edges.

To create the image below I created two layers. One was the white background layer. The other was a transparent raster layer on which I filled a rectangular selection with a paper texture. I deselected the paper and, with three clicks of the Eraser brush (click, shift-click, shift-click) on the corners of the paper, I had deckled edges. :) I added a minimal drop shadow as a final touch.

Options to explore:

- Examine the Jitter settings and figure out how it works.
- Create your own deckle edge brush tips! All sorts of effects are possible.
- Use the brush tip with other brush tools.

Installation instructions:

[Download the files.](#) Place them in your Brushes folder.

To Use:

Open or create a new image. Select the Eraser tool and the Deckle Edge brush tip.
