

## SplitToHSL 0.1

This is my version of Split To HSL. The script uses some channel magic to separate out the Hue, Saturation, and Lightness channels and then combines them to form a layer group. The difference between this script and SplitHSLToLayerGroup is that here the layers and blend modes are constructed such that they combine to form the original image! You can manipulate these layers and see the changes immediately without having to recombine them in a separate step.

### Installation instructions:

[Download the script.](#) Place the script in your Scripts-Restricted folder.

### To Run:

Open or create a new image. Select the SplitToHSL script in the scripts list and press play.

### Change history:

Changes in 0.1 (04/05/03):

- Original version.
