Tunnel Brush
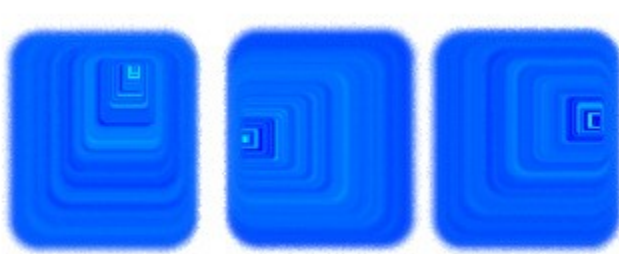

This is just a toy brush preset. It is useful as an example of some the sorts of odd effects you can produce with the brush variance settings. For a more useful version of a 'tunnel' brush see Tunnel Brush Redux.

Set the foreground and background to different colors. If you change the brush size, set the fade rate (in the brush variances) to a little less than half the size. Setting it to over half gives a different effect.

Options to explore:

- Examine the Jitter settings and figure out how it works.
- Set the fade rate to greater than half the brush size

Installation instructions:

Download the file. Unzip it and place the result in your **Presets** folder.

To Use:

Open or create a new image. Select the Paintbrush tool and select Tunnel from the list or presets.

Change history:

Changes in 0.1 (02/25/03):

- Original version.
