Paste-n-Move 0.1

PSP8, unlike PSP7, does not automatically switch to the Mover tool after doing a Paste As New Layer. If you miss this behavior, you may use this script to to do the same thing in PSP8.

Installation instructions:

[Download the script](#). Place the script in your Scripts-Restricted folder. If you want to use this script from a keyboard shortcut you will need to do two additional things. One is to make a copy of this script and name it BoundScriptN where N is the number 1-9 of an unused bound script. The other is to assign the bound script to a key of your choice (such as Ctrl-Alt-L) using the View / Customize menu Keyboard tab.

To Run:

Use the keyboard shortcut you created above or select the Paste-n-Move script in the scripts list and press play.
